

GE APPLIANCES GUARANTEES DRIER DISHES AT KBIS 2020

The industry-exclusive Twin Turbo Dry Boost lets owners ditch the dish towel

GE Appliances, a Haier company, will showcase its newest industry-exclusive dish feature, Twin Turbo Dry Boost at the Kitchen and Bath Industry Show (KBIS Booth #C6331) in Las Vegas, Nev. January 21 – 23.

Twin Turbo Dry Boost: Drier Dishes Guaranteed

Driven by the knowledge that plastics are an everyday item in the home and armed with the knowledge that water left on them is a top consumer pain point, our engineers got to work. The result is our industry-exclusive Twin Turbo Dry Boost, which provides a complete dry every time, avoiding the need for a dish towel, drying rack or waiting long periods to unload the dishwasher after the cycle is complete. This new technology creates a convection like atmosphere inside the unit, providing a consistent level of heat for the entire dry cycle while a fan draws moisture out of the unit through a hidden vent. The result is dry dishes, every cycle, every time.

Other features include:

- **Leak Defense with Active Flood Protect:** Provides peace of mind that owners will not come home to a flooded kitchen, and if a problem is suspected, a notification will be sent through the GE app.
- **Deep Clean Silverware Jets:** Dedicated jets underneath the silverware basket attack caked-on food remnants like peanut butter, cheese and oatmeal.
- **Amazon Dash Dish Pod Replenishment:** Ensures that owners never run out of detergent, tracking pod usage and sending reminders to re-order directly to a smart device.
