

BOWERS & WILKINS DIAMOND SURROUND SOUND SYSTEM. A new standard for car audio.

Available as a premium option with the BMW X5, the Bowers & Wilkins Diamond Surround Sound System redefines what's possible for sound quality within a car.

DIAMOND DOME TWEETERS

Diamond's unique stiffness-to-lightness ratio helps make it the perfect tweeter material. Grown in laboratory conditions, diamond tweeter domes are found in Bowers & Wilkins' most advanced studio speakers – and in the BMW X5.

NAUTILUSTM

Inspired by the Bowers & Wilkins iconic Nautilus speaker, spiraling diffusion channels soak up reflected sound from the rear of each drive unit, reducing resonance to a minimum.

ARAMID FIBRE

Bowers & Wilkins' innovative use of Aramid Fibre ensures that mid-range distortion is reduced and off-axis performance is improved. The result is a cleaner, more natural sound which makes you feel like you're there with your favourite band or artist.

ROHACELL®

A composite material used in aeronautics and racing car bodies, Rohacell's ideal balance of lightness and rigidity makes it the perfect bass driver material.

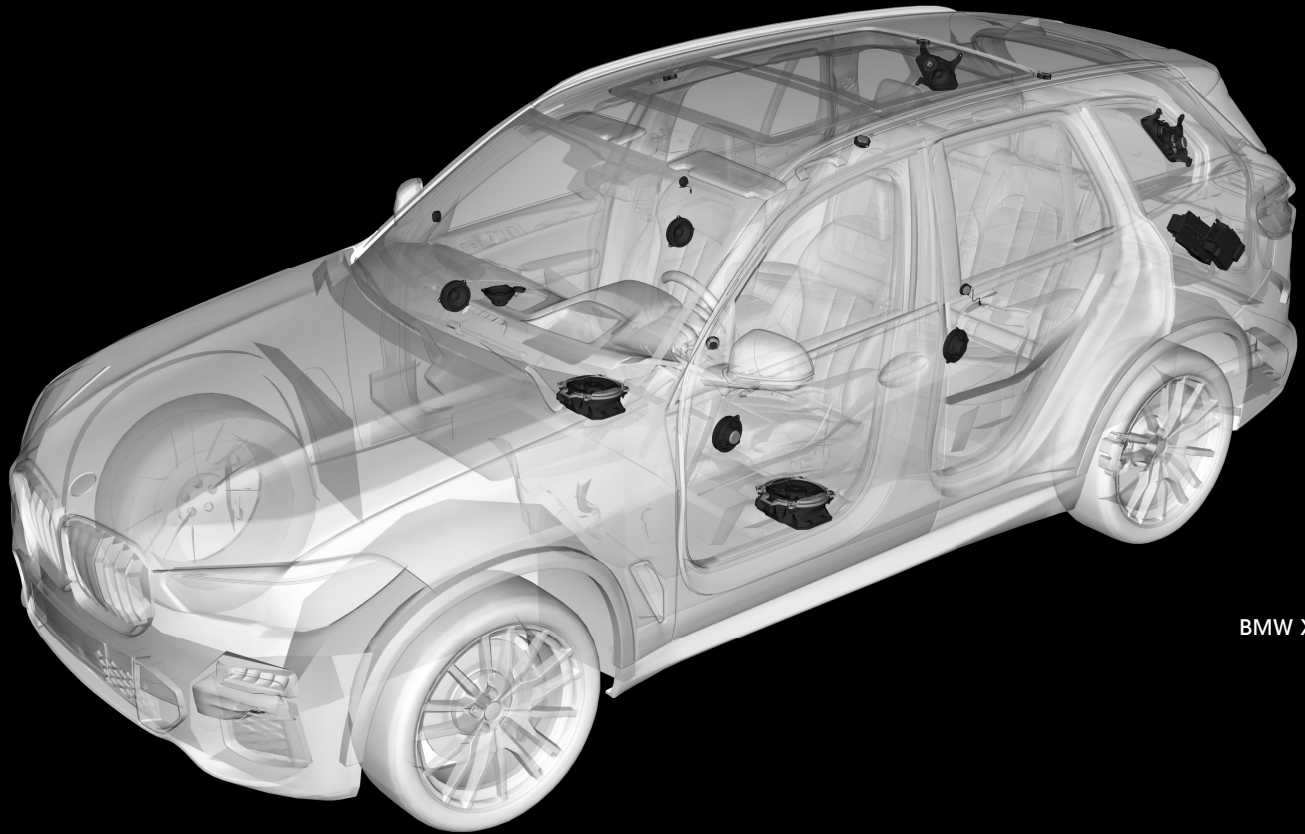

SOUND AND LIGHT

The speakers of the Diamond Surround Sound System include subtle illumination in the front and rear doors. Housed behind etched stainless steel, the Fibonacci patterned grille offers optimal acoustic transparency.

3D SOUND

Through the exacting positioning of its speakers the Diamond Surround Sound System delivers a crystal clear and pure acoustic evenly spread in the whole interior, assuring a true 3D sound experience on all seats.
