CLEAN ENERGY PLAN WIND PROJECTS

Xcel Energy typically files a resource plan every four years with the Colorado Public Utilities Commission. These plans project electricity demand for the coming years and how we will meet it to ensure reliable service for our customers. In early 2024, the Commission approved Phase 2 of our resource plan portfolio, called the Clean Energy Plan. The approved portfolio will add approximately 6,100 megawatts (MW) of new generation, making it the **largest clean energy portfolio in state history** by significantly increasing the amount of renewable energy on our system.

The approved portfolio includes 20 projects that will help us meet our forecasted electric needs through 2028.* Xcel Energy will own nine of the projects, and the other 11 projects will be Purchased Power Agreements. As part of the plan approval, state regulators determined the Xcel Energy-owned projects are both necessary and beneficial for the public. In March 2025, we submitted Certificate of Public Convenience and Necessity applications containing current cost estimates and construction schedules for three wind projects as a follow-on step, which the Commission approved in September 2025.

CHEYENNE RIDGE 2 WIND PROJECT	
Capacity	450 MW
Location	Cheyenne and Kit Carson counties
Estimated construction start date	Early 2025
Projected in-service date	Mid-2026
Job creation estimate	281 construction jobs, 10 permanent jobs

SINGING GRASS WIND PROJECT	
Capacity	603 MW
Location	Kit Carson County
Estimated construction start date	Mid-2025
Projected in-service date	Late 2026
Job creation estimate	338 construction jobs, 13 permanent jobs

TOWNER WIND PROJECT	
Capacity	500 MW
Location	Kiowa County
Estimated construction start date	Early 2026
Projected in-service date	Mid-2027
Job creation estimate	260 construction jobs, 8 permanent jobs
